Course Description
This course is directed toward planning the rehabilitation research project appropriate for a doctorate. Included in the course content are the formulations of a conceptual framework relative to the analytic process, constructs and variables, variance control, type of inquiry, measurement, instrumentation, procedures, data collection, analysis, discussion, conclusions and recommendations.

Course Objectives
1. The identification of a viable research topic consistent with doctoral-level study.
2. Developing a structure from which to write a dissertation including quantitative both group and single subject design, and qualitative research.
3. Writing a problem statement.
4. Developing a literature review and conducting background research.
5. Developing a methodology and plan for implementing a research project.
6. Understanding Results, Discussion, and Conclusion chapters of the dissertation.
